UniProt_03:*
1: uniprot_sprot:*
2: uniprot_trembl:* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C -1- FUNCTION: Controls S-phase checkpoint as well as G1 and G2 DNA damage checkpoints. Prevents entry into anaphase and mitotic exit after DNA damage via regulation of the Polo kinase CD5. Seems to be involved in the phosphorylation of RPH1.

C -1- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

C -1- CATALYTIC ACTIVITY: And P a protein = ADP + a phosphoprotein.

C -1- FTM: Autophosphorylated.

C -1- SIMILARITY: Belongs to the Ser/Thr protein kinase family.

C -1- SIMILARITY: Contains 2 FHA domains.
                                                                                                                                                                                                                                                     PHÖSPHORYLATION.

"Creation of the YELEX clone resource: cloning of Saccharomyces cerevisiae ORFs in the Gateway recombinational cloning system.";

Submitted (JUL-2004) to the BMBL/GenBank/DDBJ databases.

-! SIMILARITY: Belongs to the Ser/Thr protein kinase family.

Lu Submitted (JUL-2004) to the EMBL/GenBank/DDBJ databases.

-1-SIMILARITY: Belongs to the Ser/Thr protein kinase family.

05-ULL-2004 (Rel. 44, Last annotation update)
Meiosis-specific serine/threonine-protein kinase mek1 (EC 2.7.1.37).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      recombination.
--- CATALTIC ACTUITY: ATP + a protein = ADP + a phosphoprotein.
--- SIMILARITY: Belongs to the Ser/Thr protein kinase family.
--- SIMILARITY: Contains 1 FHA domain.
                                                                                                                                                                                                                          4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -!- FUNCTION: Probable protein kinase required for meiotic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note=No experimental Confirmation available,
Note=No experimental Confirmation available,
DOWAIN: The FHA domain may be required to interact with
phosphorylated proteins (By similarity).
PTM: Autcoubiquitinated in vitro (By similarity).
PTM: Phosphorylated by PKB. Phosphorylation may affect its E3
ligase activity (By similarity).
SIMILARITY: Contains 1 FHA domain.
SIMILARITY: Contains 1 FHA domain.
CAUTION: According to some authors it can ubiquitinate and promote
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and mouse cDNA sequences."

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

-!- FUNCTION: E3 ubiquitin-protein ligase required to transfently arrest cells in early prophase when they are exposed to microtubule poisons. Acts in early prophase before chromosome condense, when the centrosome move apart from each other along the periphery of the nucleus. Probably promotes the formation of Lysebalphery of the nucleus. Probably promotes the formation of Lysebalphery of the nucleus. Probably promotes the formation of Lysebalinked polyubiquitin chains and functions with the specific ubiquitin-conjugating UBC13-MMS2 (UBE2N-UBE2N2) heterodimer.

Substates that are polyubiquitinated at Lys-63 are usually not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      targeted for degradation, but are rather involved in signaling cellular stress. This suggests that it may be involved in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 signaling the presence of mitotic stress caused by microtubule poisons (By similarity).

              involved in mitotic progression. However, as experiments have been done either in vitro or with extracts from Xenopus, there is actually few evidence for a role of CHFR in protein degradation in vivo.
